

Digital Maturity Check

Digitalization is a challenge for hospitals. At the same time, a lot of money can already be saved in the planning of digitization projects during implementation and change management. In this context, our Digital Maturity Check allows us to record the current state of digitization in order to define targeted and efficient measures.

Pain Points

- Lack of clarity about current state of digital maturity
- Uncertainty about strategy for digitalization efforts
- One-sided view of the company
- Acceptance of change measures by employees and/or management
- Expensive and time-consuming analyses

Procedure

- 1** Preliminary interview and context-based adaptation of the questionnaire
- 2** Implementation and evaluation of the survey
- 3** Presentation of the results & discussion of possible solutions

Customer benefits

360° view

With contributions from the different stages and areas, the result is an all-round view and a simultaneous increase in the acceptance of all stakeholders.

Gap identification

By means of focus definition and customizable question catalogue, the Maturity Check allows an analysis tailored to individual needs.

First results within 3 weeks

Thanks to the consolidated procedure, initial results are available within a very short time and allow a well-founded definition of the package of measures.

Experience

With the Maturity Check as an initial analysis tool, we defined focal points for the IT strategy together with the client. The analysis created a basis for an open discussion and drew attention to the relevant experience pain points. This made it possible to work out quick wins and define long-term goals together with the client.
