

KHZG Implementation Phase

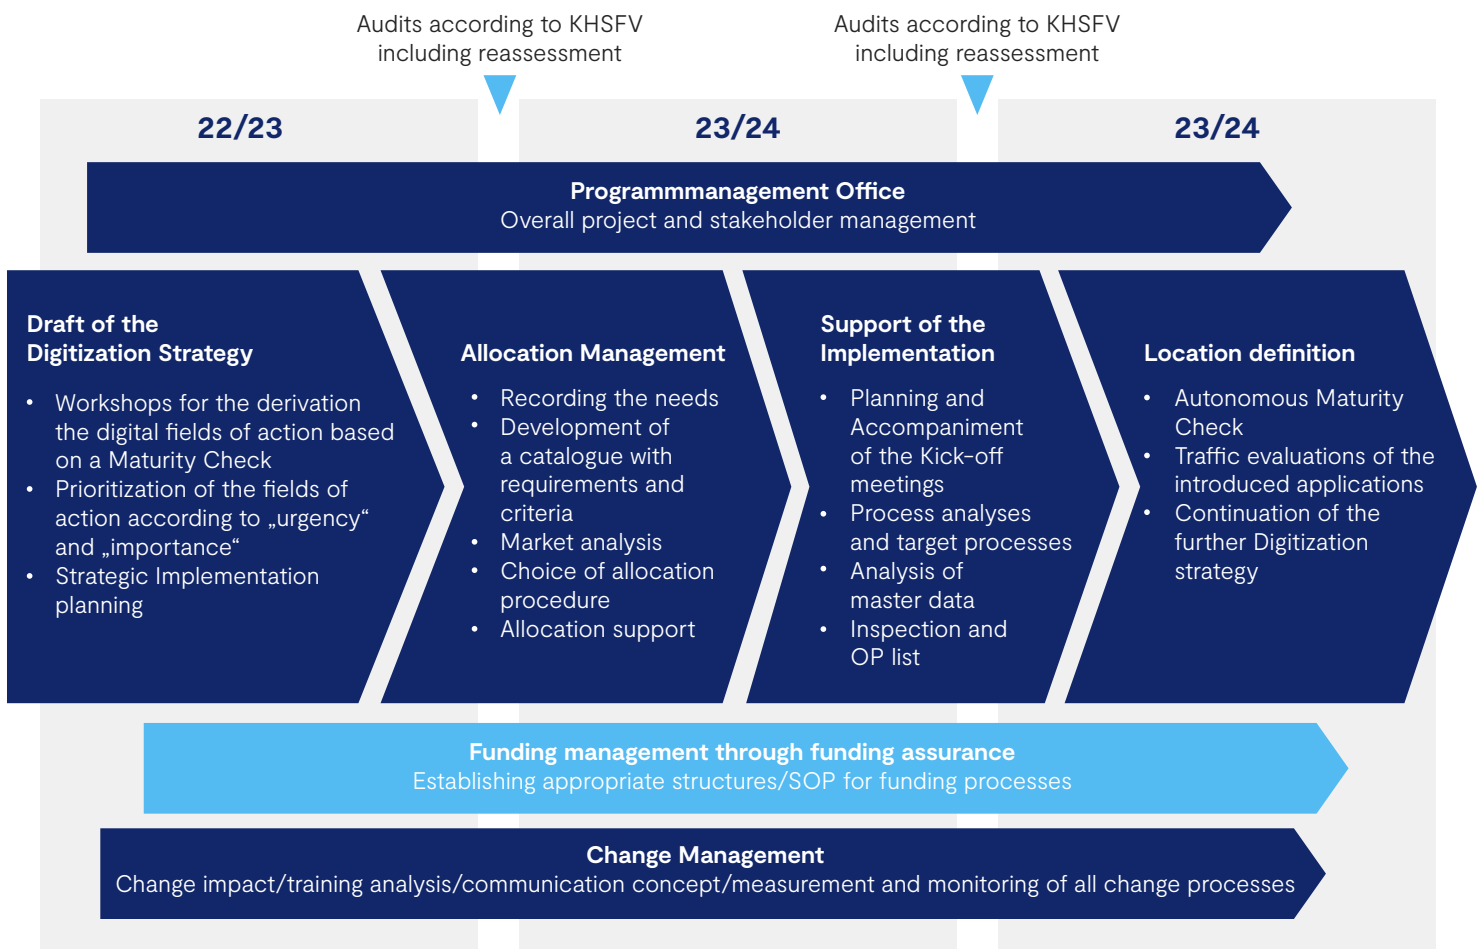

The Hospital Futures Act (KHZG) offers hospitals a legally unprecedented kick-off funding for digital projects. Nevertheless, the financial support from the KHZG is not sufficient for the transformation to an innovative health care provider. Instead, in addition to the introduction of IT systems, there is a need to shape culture, organization, and work processes in such a way that hospitals and their staff can cope with major change processes and technologies. For this reason, it is essential to set the course for a sustainable hospital transformation in the second half of the KHZG decade. This is exactly where Detecon offers supportive technology consulting throughout the entire value chain of the KHZG implementation phase.

Pain Points

- Absence of a strategic vision regarding essential clinical and procedural needs
- Missing human resources in specialist departments and IT
- Increasing realization pressure due to a small time window
- Limited project management structures for complex multi-projects
- Integration of new systems into an interoperable system landscape

Approach

Consultation fields for the KHZG - according to the funding decisions

■ Digitization ■ Funding management

Customer benefits

Pool of experts

With our specialists in interface technology in the healthcare sector, medical, nursing, and administrative processes, solution architects for application landscapes in hospitals and project managers who work in the hospital world on a daily basis, we can offer our customers a diverse pool of experts to implement digital-specific requirements in the hospital environment:

Value-creating synergy potential

The synergies with Deutsche Telecom Clinical Solutions provide Detecon with unique expertise in the areas of connectivity, digital ecosystems, and digitalization strategies, which also drive the digital transformation to smart hospitals beyond the KHZG.

Connectivity

Our roots in the telecommunications industry allow us to plan, design and implement custom-fit data-centric models for connectivity, considering all the demanding requirements of data connectivity for hospitals.

Experiences

The future viability of German hospitals lies in digitalization. As a digital hospital specialist, we would be happy to support you in this with our large consulting portfolio.
